

Suppl. Figure 5

Suppl. Figure 5: Consistent best models, after correction for additional cohort-specific covariates, across three adult cohorts stratified by MAD-score percentile cutoff ($\geq 80^{\text{th}}$ percentile: $n=45,672$ sites; $\geq 85^{\text{th}}$ percentile: $n=31,988$ sites; $\geq 90^{\text{th}}$ percentile: $n=20,196$ sites; $\geq 95^{\text{th}}$ percentile: $n=9,681$ sites).
